

STAr

## WEAPONS TRACEABILITY SYSTEM

The Weapons Traceability System is a technological solution for the need for information on the location and firing of each weapon during its use. It provides tactical and logistical support to the agents of the Forces deployed in the field..

### Applications

- Operational Support.
- Tactical support.
- Arsenal management.
- Training control.
- Integration with other databases.

## APPLICATIONS AND FEATURES

### Operational support:

- Weapons geolocation.
- Gunshots detection.
- Loss or theft detection.
- Emergencies and confrontations detection.
- Vandalism event detection on the system.
- Weapons deployment control.
- Real-time deployment mapping.
- Tracking of lost firearms.
- Activity log (black box of the weapon).
- Behaviour patterns detection.

### Tactical support:

- Geolocation and tracking of forces personnel, patrols and operations.
- Delimitation of areas (geofences).
- Tactical map for the squadron commander by use of a tablet App.
- Ability to be used with cooperative and non-cooperative users.

### Arsenal management:

- Maintenance alarm/alert.
- Users log.
- Use rate and gun turnover logs.
- Real-time and on-line inventory control.
- Real-time weapon allocation management according to available authorisations, purposes and destinations.

### Integration with other databases:

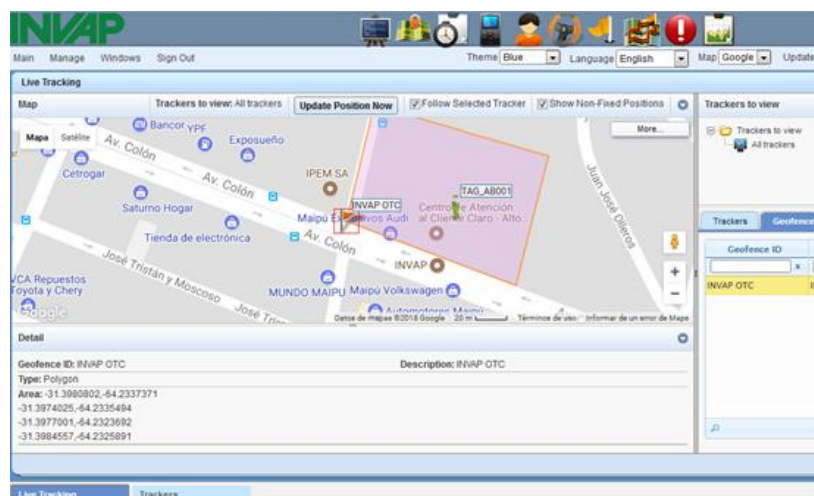

- Crime maps.
- Forensic information.
- Personnel database.
- Other databases of interest.

### Training control:

- Personalised monitoring of shooting regulatory practices.
- Shooting practices log report by individual, force or area

TAG for Beretta 92FS

## MONITORING CONTROL SYSTEM

- Personalised maps georeferencing
- Geofences
- Configuration of alarms and events
- Data Analysis
- Personalised report)

INVAP's headquarters are located in San Carlos de Bariloche at the foot of the Patagonian Andes. The company has offices in several cities throughout Argentina and operates in various countries.
